Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The disclosure is objected to because of the following informalities: throughout the disclosure and claims the use "parallel spiral" is questionable. Although, it is clear what is meant by the term it does not appear to be within the definition since spiral contradicts the straight lines required of parallel.

Appropriate correction should be considered.

Claim Rejections - 35 USC § 112

Claims 9 and 10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. With respect to claims 9 and 10, it is unclear if applicant intends to claim simply the pin or its combination with the first and second sheets because contrary to the preamble, the body of the claims include specifics requiring the combination.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 3679

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 8, 11 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Ditka. Ditka discloses a drive pin comprising a shank with a head (124) at one end, a tip (122) at the other end and a knurl formed as parallel spiral grooves (28) angled relative to the longitudinal axis of the shank. The angle being disclosed as between 0 and 45 degrees which includes the angles which are claimed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dove in view of Ditka and Rosenberg. Dove discloses a drive pin in the environment as defined in the claims (ie. sheet material fastener) including spiral grooves (19) but, does not disclose the angle of the spiral grooves as claimed. Ditka disclose a drive pin including the angle of the spiral grooves relative to the longitudinal axis as described in the above however, the pin of Ditka is intended to use in a different environment (ie. masonry). Rosenberg is a linking reference which teaches the use of the same spiral grooved fastener in both environments. In view of the teaching of Rosenberg, the person of ordinary skill in the art would have recognized to angle the spiral grooves of

Dove as disclosed in Ditka in order to optimize both the insertion and retention of the pin. The specific sizes of the pin would have been recognized since it is well known to vary the sizes of pin fasteners depending upon the particular application.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
